About This Game

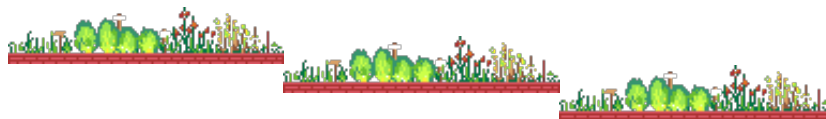

*** Game ***

Roguelike platformer game.

A little girl Lily explores around the dungeon with beating monsters.

Let's beat the monsters with robot, sword, gun and trained body.

*** Synopsis ***

Due to the Great War, human being had to shift their living place to the underground towns they have created. However, the underground society is now about to self-destruct. The protagonist heads to the above-ground world, through the dungeon filled with monsters.

This game does local co-op very well. The game is so simple, but so much fun, too.. A nice puzzle game where you collect items, trade them for other items or gold and solve the problems of people around you on your way to become a hero. I really enjoyed it. The only negative thing is the very short play time. I 100% completed it in just 4 hours.. Everytime i played this game it would stop working in 1 min half way through a mission i wasted my money on this♥♥♥♥♥i could've bought a key for unturned with how much this costs.. This felt like a rushed game. It looks and handles very poorly and doesn't play well at all.. hit hard with nostalgia. fun gamr. How to git gud in 1.4.10

Play the level as best as you can.

Stop before the final end card.

Save and quit -> back to menu

Continue the save game and end it with the sad moans of your people.

When you click 'Classic' you can choose to continue from previous save to hera your people's moans again.

Farm stars.

???. This game is actually really cool and fun I feel like Iu2019m operating a mech from the 3rd matrix movie but fighting zombieVrobots very very fun and refreshing. The biggest problem with this game is every time you shoot a ship or a ship shoots one of the "people" it results in a large distorted explosion. Repeated explosions make it difficult impossible to see if things are coming at you, particularly missiles that kill you. You can see examples of this in the screenshots. That's on top of the confusing blue background that is nearly the same color as your ship.

I think there was a reason old-school shooters kept the graphics simple with a black background. If the dev cleared up some of the color confusion and get rid of the distortion, it'd be a decent remake of old-school space invaders. Otherwise, it's hard to recommend, even when it's on sale for a decent price.

Nice, good, short and to the point. A platformer that you can enjoy in a lunch hour.. If you got the itch and Masters of Orion 3/ civ 4/ galactic civ 2 are up your alley then this game might entice you for a bit. It is a slow paced, space empire building, turn based game. If you like those things than this slow 4x space game might be for you. Likely you will not play it more than 1 time through sucesfully though (the first few times you will lose than eventually spend hours building up the perfect empire and win) because even with many different maps all space looks the same. Unfortunately it is a port from a phone. It shows.. Bought it for 70 cents.

Never played it.

10/10. I really liked the mobile game. It remains one of the best indie games I've played to date. This version is literally just a direct upgrade. Upgraded art style and upgraded design. My only complaint is that the game is impossible with only a mouse and keyboard. The controls are clunky and hard to complete with speed. If you use a controller, the game is even better than the mobile version.. One of my favorite games on steam. 100% recommend.
